

**Pimpri Chinchwad Education Trust's**

**PIMPRI CHINCHWAD COLLEGE OF ENGINEERING**

**SECTOR NO. 26, PRADHIKARAN, NIGDI, PUNE 411044**

An Autonomous Institute Approved by AICTE and Affiliated to SPPU, Pune

**DEPARTMENT OF COMPUTER ENGINEERING**

**Curriculum Structure and Syllabus  
of  
Honors in Deep Learning  
(Regulations 2020)**

**Effective from Academic Year 2024-25**

## Institute Vision

To be one of the top 100 Engineering Institutes of India in coming five years by offering exemplarily Ethical, Sustainable and Value Added Quality Education through a matching ecosystem for building successful careers.

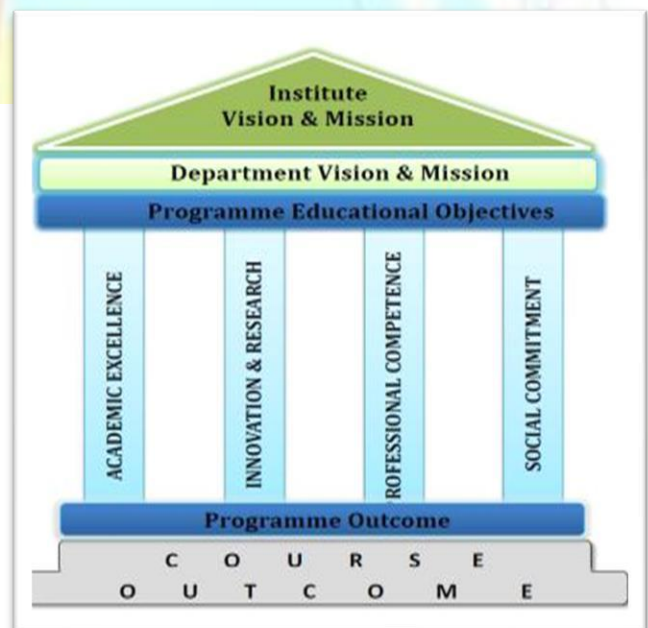

## Institute Mission

1. Serving the needs of the society at large through establishment of a state-of-art Engineering Institute
2. Imparting right Attitude, Skills, Knowledge for self-sustenance through Quality Education
3. Creating globally competent and Sensible engineers, researchers and entrepreneurs with an ability to think and act independently in demanding situations

## Quality Policy

We at PCCOE are committed to impart Value Added Quality Education to satisfy the applicable requirements, needs and expectations of the Students and Stakeholders. We shall strive for academic excellence, professional competence and social commitment in fine blend with innovation and research. We shall achieve this by establishing and strengthening state-of- the-art Engineering and Management Institute through continual improvement in effective implementation of Quality

Management System.

6	Project Stage - II	HCE8982	17	

**Approved by Academic Council:**

Chairman, Academic Council  
Pimri Chinchwad College of Engineering

## Preface

Looking at Global Scenario to enhance the employability skills and impart deep knowledge in emerging/ multidisciplinary areas, an additional avenue is provided to passionate learners through the Minors and Honours Degree Scheme in academic structure.

For **Honors degree** program, student has to earn additional 20 credits in emerging area of one's own domain.

### Objectives of Honors Degree

- To enable students to pursue allied academic interest in contemporary areas.
- To provide effective yet flexible options for students to achieve basic to intermediate level competence in the contemporary area.
- To enhance the employability skills with different combinations of competencies and flavors.
- To provide an academic mechanism for fulfilling demand of specialized areas from industries for higher order skill jobs.
- To provide a strong foundation to students aiming to pursue research/ higher studies in the contemporary field of study.

## **Preface of Honors in Deep Learning**

The growth in AI is owed to the fact that quintillions of data is generated each day, which makes these technologies more relevant, stronger and beneficial in today's age. Virtual assistants, translators, chatbots, driverless vehicles, and many more applications are the result of these futuristic technologies. The Deep Learning approach of AI provides a foundation for problem solving that impacts virtually all areas of the economy, including science, engineering, medicine, banking, finance, sports and the arts. Deep learning is an interdisciplinary field that mimics the functioning of the human brain to find correlations and patterns by processing data with a specified logical structure. Deep learning models use multiple hidden layers in the neural network as opposed to traditional neural networks that only contain a handful of hidden layers. Deep learning algorithms map inputs to already learned data to deliver an accurate output. The concept underpinning this technology is very similar to how our brain functions (biological neural networks). Deep learning models are trained by using large sets of labeled data and neural network architectures that automate feature learning without the need for manual extraction.

### **Learning Objective**

Honors courses in Deep Learning will enable learners to build expertise in Deep Learning, starting from essential theoretical foundations to learning how to apply them in the real world effectively. The programme creates a practical understanding of how Deep learning algorithms can be developed and optimized for hardware. Such systems can be used in cutting edge research where power and performance are the major constraints. The start of course will cover the foundation of Neural networks and Deep learning. Each unit will cover different models starting off with fundamentals such as Linear Regression, and logistic/softmax regression. Followed by Feedforward deep neural networks, the role of different activation functions, normalization and dropout layers. Then Convolutional Neural Networks and Transfer learning will be covered. Finally, several other Deep learning methods will be covered. The laboratory sessions will cover fundamentals of deep learning and its applications including speech, text, image, and video processing. The advanced stage of course will cover the practice of essential tools such as Tensorflow, Keras, PyTorch etc. It also includes project work for learners to implement and develop problem solving abilities for real problems.

### What you will learn

- Build ML models with NumPy & scikit-learn, build & train supervised models for prediction & binary classification tasks (linear, logistic regression)
- Build & train a neural network with TensorFlow to perform multi-class classification, & build & use decision trees & tree ensemble methods
- Apply best practices for ML development & use unsupervised learning techniques for unsupervised learning including clustering & anomaly detection
- Build recommender systems with a collaborative filtering approach & a content-based deep learning method & build a deep reinforcement learning model

### Learning Outcome

The course will teach you how to develop deep learning models using recent frameworks. The course will start with introduction to the DL framework. Then each section will cover different models starting off with fundamentals such as Linear Regression, and logistic/softmax regression. Followed by Feedforward deep neural networks, the role of different activation functions, normalization and dropout layers. Then Convolutional Neural Networks and Transfer learning will be covered. Finally, several other Deep learning methods will be covered.

After completing this course, learners will be able to:

- Apply and Demonstrate the knowledge of Deep Neural Networks and related machine learning methods
- Use the Python libraries for Deep Learning applications
- Build Deep Neural Networks using recent DL frameworks
- Evaluate the performance of DL models on bench mark and real world datasets

<b>Prior knowledge of</b> Machine learning algorithms and Python programming language, Working with an anaconda environment, Managing the python packages and multiple anaconda environments. <b>is essential.</b>							
<b>Course Objectives:</b> <ol style="list-style-type: none"> <li>To illustrate simple neural networks and deep neural networks.</li> <li>To interpret the model results and analyze the accuracy of the model.</li> <li>To explain different preprocessing operations on structured data or on unstructured data.</li> <li>To explain how to predict the results using a trained model.</li> </ol>							
<b>Course Outcomes:</b> After learning the course, the students will be able to: <ol style="list-style-type: none"> <li>Perform different pre-processing operations on structured or unstructured data</li> <li>Design neural network layers for various learning problems.</li> <li>Demonstrate binary as well as multi- class classification problems.</li> <li>Interpret the model results and analyze the performance of the model.</li> <li>Apply statistical concepts and perform Exploratory Data Analysis.</li> <li>Implement, train, and validate their own neural network.</li> </ol>							
<b>Guidelines for Students:</b> <ol style="list-style-type: none"> <li>The laboratory assignments are to be submitted by students in the form of a journal. Journal consists of prologue, Certificate, table of contents, and handwritten write-up of each assignment.</li> <li>Each assignment write-up should have Title, Objectives, Outcomes, Theory- Concept in brief, dataset used, data description, Conclusion, Assessment grade/marks and assessor's sign.</li> <li>Program codes with sample output of all performed assignments are to be submitted as softcopy.</li> </ol>							
<b>Guidelines for Laboratory /TW Assessment:</b> <ol style="list-style-type: none"> <li>Continuous assessment of laboratory work is done based on overall performance and Laboratory performance of students.</li> <li>Each Laboratory assignment assessment should assign grade/marks based on parameters with appropriate weightage.</li> <li>Suggested parameters for overall assessment as well as each Laboratory assignment assessment include- timely completion, performance, innovation, efficiency, punctuality, and neatness.</li> </ol>							
<b>Guidelines for Laboratory Conduction</b> <ol style="list-style-type: none"> <li>Operating System recommended: - 64-bit Open-source Linux or its derivative</li> <li>Programming tools recommended: - Python, OpenCV</li> <li>Use of Anaconda platform is encouraged.</li> </ol>							
<b>Suggested List of Assignments</b>							

Assignment No.	Assignment Title
1.	Write a program to build a logistic regression classifier with a Neural Network mindset . Consider following guidelines. <ol style="list-style-type: none"> <li>a. Consider any convenient dataset (Cats dataset etc.) and pre-process the dataset.</li> <li>b. Define the appropriate model structure.</li> <li>c. Evaluate the model performance.</li> <li>d. Analyze the obtained results</li> </ol>
2.	Implement a multilayer perceptron (MLP) model for prediction such as house prices. <ol style="list-style-type: none"> <li>a. Perform Exploratory Data Analysis</li> <li>b. Prepare dataset</li> <li>c. Build MLP model</li> <li>d. Evaluate Model performance</li> <li>e. Predict for test data</li> </ol>
3.	Build a Multiclass classifier using the CNN model. Use MNIST or any other suitable dataset. <ol style="list-style-type: none"> <li>a. Perform Data Pre-processing</li> <li>b. Define Model and perform training</li> <li>c. Evaluate Results using confusion matrix</li> </ol> (OR) Design an object detection model using deep neural networks for simple objects. <ol style="list-style-type: none"> <li>a. Select appropriate dataset and perform data pre-processing</li> <li>b. Define architecture in terms of layers</li> <li>c. Evaluate Model performance</li> </ol> Label the object with appropriate text.
4.	Install OpenCv package on your system and perform following operations on images. <ol style="list-style-type: none"> <li>a. Image Sharpening</li> <li>b. Edge Detection &amp; Image Gradients</li> <li>c. Cropping</li> <li>d. Blurring</li> </ol> Background Subtraction Method

## Department of Computer Engineering

1.	Apply a pre-trained network and apply it to a new task using transfer learning a) Use any three pre-trained models including AlexNet, GoogleNet, VGGNet, MobileNet, ResNet, DenseNet, etc. b) Fine-tune the hyper-parameters and compare their performance for a suitable application.
2.	Design RNN or its variant including LSTM or GRU a) Select a suitable time series dataset. Example – predict sentiments based on product reviews b) Apply for prediction
3.	Implement Auto-encoders for any of the task including: a) Data Compression b) Image de-noising c) Dimensionality reduction
4.	Design and implement Deep Convolutional GAN to generate images of faces/digits from a set of given images.

<b>Course Outcomes:</b>							
After learning the course, the students will be able to:							
<ol style="list-style-type: none"> <li>1. Identify technical ideas and its relevance in recent tools and technologies.</li> <li>2. Implement the methods relevant to the problem statement.</li> <li>3. Critically analyze the results and their interpretation.</li> <li>4. Demonstrate working models and prepare good quality technical reports.</li> <li>5. Present knowledge of team work.</li> </ol>							
<b>Guidelines for Project Stage -II:</b>							
<ul style="list-style-type: none"> <li>• In Project Work Phase-II, the student shall complete the remaining project work which consists of Selection of Technology and Tools, Installations, UML implementations, testing, results, performance discussions using data tables per parameter considered for the improvement with existing/known algorithms/systems and comparative analysis and validation of results and conclusions.</li> <li>• The student shall prepare and submit the report of Project work in standard format for satisfactory completion of the work that is duly certified by the concerned guide and head of the Department/Institute.</li> </ul>							

## Vision and Mission of Computer Department

### Department Vision

To be a premier Computer Engineering program by achieving excellence in Academics and Research for creating globally competent and ethical professionals.

### Department Mission

M1: To develop technologically competent and self-sustained professionals through contemporary curriculum.

M2: To nurture innovative thinking and collaborative research, making a positive impact on society.

M3: To provide state-of-the art computing environment and learning opportunities through Center of Excellence.

M4: To foster leadership skills and ethics with holistic development.

"Knowledge Brings Freedom"

Progress, Credibility, Confidence  
Optimism, Excellence
